

Highland Horse

ADVERTORIAL

Highlands Natural Hoofcare

Highlands Natural Hoofcare has been operating in the Southern Highlands and surrounding area for one year. Lindon and Deb Reid promote the practice of 'barefoot trimming' as a means of improving horses' well being and performance across a wide variety of disciplines. Their client base includes owners who keep horses as pets, retired horses, show jumpers, miniatures, pony club mounts, dressage, show horses and eventers. Lindon and Deb breed and ride endurance Arab horses - the most demanding of all disciplines, on horses feet. They have been excited by the response to barefoot trimming and the results that many clients are experiencing both in performance horses and in rehabilitation cases. They have persevered with horses that have been previously 'written off' as hopeless cases and following a regime of good nutrition, careful correct hoof trimming practice and chiropractic advice, have returned these horses to premium health.

Client testimonials are as follows:

"I have 3 horses in the Highlands ranging in age from 8 years to 25 years. I do not live permanently in the Highlands and needed to find a hoof care solution to keep my horses feet in the best possible condition. Highlands Natural Hoofcare have not only improved the movement and balance of my horses, they have also supported me in attending to my horses when I am not there for their regular trims. This helps me a lot given I am not in the Highlands during the working week and gives me peace of mind knowing they are in good hands. It is amazing to watch Lindon ply his trade and reshape and care for a horses hoof! My horses and I could not be happier."

My horse, Lenny, is a 10 year old thoroughbred, ex race horse who came to us with terrible shod feet full of holes and soreness and a bad back. Lindon trimmed the hooves back to a natural shape and over time we have conditioned Lenny's hooves by riding him on hard ground. Now he is the envy of the pony club because he looks so gorgeous and his performance in jumping has improved so much. I always knew he was a winner and barefooting has brought out the best of his natural talent. Lindon and Deb were so helpful in diagnosing his back, feet and nutrition problems. I would never go back to shoes again!

Lenny and Mikaela

"We own and care for nine horses aged from 0-22 years, of four different breeds and in various equine disciplines. After learning of the benefits and high importance of natural hoof conditioning and management we soon engaged the services of HNH and although I could speak for hours at length about our positive experiences in this area, I thought it would be best to summarise the benefits we have most frequently found evident in our horses since they have been receiving HNH;

- improved conformation and movement
- increased stamina and excellent health
- free-er, springy-er stride under saddle
- happier, more willing to work
- superior grip in cross country, and blatantly advantaged on wet courses

I would strongly recommend to anyone who loves their horse and would be willing to own a happier, better-performing, healthy horse that is full of vitality, to experience the difference with Highlands Natural HoofCare."

"Deb and Lindon have been attending to our 6 miniature pet horses for 12mths. Two of our horses had foundered, and were unable to move unless they had been given

pain relief. A Vet of excellent repute felt it would be kinder to consider euthanasia. With the treatment, care and attention provided by Deb and Lindon, they are now able to trot with ease and are pain-free without medication. They have an holistic and long term approach to horse management and their advice re feeding, exercise etc has been invaluable.

My first reaction to barefoot trimming was skepticism, because it went against everything I had previously been told about founder.

12mths later the results speak for themselves. It is nothing short of a miracle! Another important plus is that Deb and Lindon make the next appointment at their visit AND keep it.

My Girls and I are forever grateful."

The classically trained horse presents himself proud and graceful in harmonious self-carriage, performing all movements with elegance and lightness. At Schooling-on-the-Ground we train riding and driving horses of all breeds in accordance with the tradition of classical-Iberian horse schooling. It is based on co-operation, not coercion and comprises basic education, lungeing, double lungeing, work in hand, liberty dressage, long reining, classical dressage and carriage driving.

Our own horses, two Trakehner, two Friesian horses and a Lipizzaner, are trained adherent to these principles. For them to be able to perform to their best, fully functional and balanced hooves are essential. Small imbalances in the hoof are amplified throughout the body, leading to an uneven load of the locomotion apparatus and thus a compromised performance. To our experience a hoof can only be functional when trimmed correctly and left unshod. We have found Lindon's trimming to achieve the balanced and fully functional hoof necessary to our precise training.
